Implementation Plan

Let's Refresh...

Problem Statement

"Stakeholders in PBL/SL settings are looking to align educational and business goals but they lack the ability to create a symbiotic experience because of unstructured workflows. Therefore, meaningful contributions are not made."

Merit-Based Admission

Ensures fairness by evaluating aptitude, GPA, and prerequisites for students and instructors

Student-Client Collaboration

Facilitates proposal submissions, project alignment, and instructor-approved matches

Workflow Tools

Unified platform with a secure drive, calendar, to-do list, and feedback system for seamless communication unified

INTRODUCTION

ANDA CURRY

Wecollab

Simplifying Project-Based Learning

Our Journey to Gather Feedback

9 Students
1 Instructor
1 Client

User Interviews

critical insights about expectations, pain points, and priorities

Task Analysis

User Testings - Users explored the Client Project Portal and dashboard tools

Post-Test Evaluation

Helped us prioritize improvements for the final prototype

So, What does the platform do?

Our platform connects students, professors, and clients through a streamlined Project-Based Learning (PBL) ecosystem. It enables students to find real-world projects, clients to submit and track proposals, and professors to manage collaboration effectively, ensuring impactful outcomes for all stakeholders.

How does our platform work?

So, What did the users have to say?

User feedback

Great for finding relevant projects,
but clearer client communication
would help

Student

"Easy to review proposals, but a
centralized communication is
needed"

Professor

"Simple to submit proposals, but
real-time status updates and
messaging are missing."

Client

Instructor App

Manage course structure, matches, workflows

What worked well?

- **Merit-Based Matches:** Evaluate students by skills, GPA, and experience for credible, aligned outcomes.
- **Workflow Monitoring:** Track project stages and deliverables seamlessly to ensure progress.
- **Centralized Collaboration:** Simplify communication and progress tracking in one unified platform.

What didn't?

- **Limited Instructor Growth:** Focuses on matching but lacks support for course design or professional development.
- **Manual Processes:** Over-reliance on manual evaluation may reduce desirability.
- **Missing Outcome Tracking:** No tools to measure skills growth, teamwork, or engagement beyond deliverables.

Solution

- **Support for Project Design:** Tools for creating briefs, objectives, and evaluation rubrics.
- **Enhanced Match Compatibility:** Ranking system for easier evaluation.
- **Outcome Analytics:** Insights on completed projects, student hours, and skill development.

Student App

Manage workflows, feedbacks and grades,
documentation, deadlines.

What worked well?

- Aggregated Documentation
- Client-Student Matching
- Feedback and Grading Integration

What didn't?

- Team applications
- Lack of Real-Time Feedback During Application
- Limited Peer Interaction

The screenshot shows a web browser window with a tab titled 'ollab.com'. The page is titled 'Submit Proposal' with a progress indicator '1/4'. The form is for 'Greentech Solutions' and is titled 'Description of the Project'. It contains several input fields and sections:

- Name:** A text input field containing 'Atharva'.
- Portfolio Link:** A text input field containing 'https://myportfolio.com'.
- Availability:** A text input field containing '2 semesters'.
- Pre-requisites check:** A section with three checkboxes, all of which are checked. The labels are 'Lorem Ipsum course 1', 'Lorem Ipsum course 2', and 'Lorem Ipsum course 3'.
- Resume:** A section with two buttons: 'Upload' and 'Enter manually'.
- Statement of Purpose:** A large text area containing the text 'I would like to join this course because...'.
- Experience:** A text input field containing '2 years'.
- Skills:** A dropdown menu showing 'Wireframing, prototyping, HTML, CSS, Figma, User research, web design'.
- Team Matching:** A section showing 'You match 80% of the project's required skills' and 'Add team members'. Below this, a dropdown menu shows 'Shaan' with a close button 'x'. A note below says 'Shaan will be notified to submit the proposal.' and a final line states 'Together, you match 92% of the project's required skills'.

At the bottom of the form, there are two buttons: a blue 'Apply' button and a grey 'Add to cart' button.

Solution

- Modular Profiles
- Provision of feedback, resources for rejected proposals
- Addition of collaboration spaces

client view

Manage projects, feedback, applications

The screenshot shows a web browser window with the URL 'pitchcollab.com'. The page is titled 'Proposal Submission'. Below the title, there is a heading 'Submit your project proposal' with a wrench and screwdriver icon and a link 'View sample'. The form is divided into sections: 'Project Overview' which includes an 'Autofill from Project Brief' section with a 'Choose File' button; 'Project Title' with a text input field containing the placeholder 'What is your project name?'; 'Project Description' with a large text area containing the placeholder 'Describe your project'; 'Skills Required' with a dropdown menu containing the placeholder 'What skills are you looking for?'; 'Time commitment' with a text input field containing the placeholder 'Hours per week'; and 'Mode of work' with two buttons: 'Remote' and 'Onsite'.

What worked well?

- **Intuitive Proposal Submission Process:** The "**Autofill from Project Brief**" feature streamlines the process, saving time for clients who already have structured documentation.
- **Showcase of Past Student Projects:** This feature builds trust and confidence in the platform by showcasing what to expect.

What worked well?

- **Intuitive Proposal Submission Process:** The "**Autofill from Project Brief**" feature streamlines the process, saving time for clients who already have structured documentation.
- **Showcase of Past Student Projects:** This feature builds trust and confidence in the platform by showcasing what to expect.

What didn't?

- **Missing Communication Options:** The Platform lacks any built-in communication or messaging tools to connect directly with professors or students.
- **No Real-Time Project proposal status:** After a client submits a proposal, there is no clear indication of its current status.

What didn't?

- **Limited Context on Past Projects:** While the Past Projects section visually showcases previous work, there's minimal context for clients to understand how these projects align with their needs.

Solution

- **Integrated Messaging System:** Add an, in-platform messaging system that allows clients to send messages directly to professors and assigned student teams. Include features like:
 - Threaded conversations for context.
 - Notifications for unread messages.
 - A "Contact Support" option for general platform queries.

Solution

- **Proposal Tracking System:**
 - Add a "Proposal Status" section in the dashboard with clear status indicators:
 - *Draft*: Proposal saved but not submitted.
 - *Submitted*: Proposal under review by the professor.
 - *Approved*: Proposal accepted and visible to students.
 - *Needs Revision*: Proposal requires client changes based on professor feedback.

Status

- ✓ Draft
- ✓ Submitted
- ✓ Approved
- ✓ Needs Revision

Solution

- **Industry Tags and Filters:**
 - Add filters for industry, complexity level, or deliverables (e.g., "Healthcare," "Mobile Prototype").
 - Use tags to categorize projects (e.g., "UX/UI Design," "Data Visualization").

So, How does it all come together?

WeCollab

1

2

3

1

Desirability (User Standpoint)

- Students appreciated the fairness of the merit-based admission process
- Clients valued detailed proposals for choosing students
- Highlighted the importance of user-friendly workflows in the portal

WeCollab

1

2

3

1

Desirability (User Standpoint)

2

Technical Feasibility (Client/User Standpoint)

- Clients found the portal intuitive but requested integration with external tools (e.g., Google Calendar) and a more profound communication system
- Students noted a learning curve for managing project workflows

Students

500+ students annually gain real-world project experience

Instructors

*Tools for instructors to manage **10-15** projects/semester effectively*

Clients

100 client projects per year, saving 30% on project costs for businesses

3rd Party Subscription:

- Basic Tier: \$500/project
- Premium Tier: \$1,500/project
- Year 1 Target: \$100,000 (100 projects).

Institution Licensing:

- \$10,000/institution/year
- Year 1 Target: 10 institutions = \$100,000.

Add-Ons:

- **Certifications:** \$50/student × 300 = \$15,000.
- **Advanced Tools:** \$200/license × 50 = \$10,000.

Revenue Breakdown: Year 1 Target

WeCollab

2

3

1

Desirability (User Standpoint)

2

Technical Feasibility (Client/User Standpoint)

3

Business Viability

- Clients saw value in matching students with projects but recommended tiered options for commitment levels
- Instructors appreciated quality control through dual-layer approvals

Phase 1

**Incorporate feedback
and update designs**

Phase 2

**Test platform
usability and collect
evaluations**

Phase 3

**Implement necessary
improvements based
on feedback**

Phase 4

**Final Platform
goes live**
