

UX Research Internship Case Study: VosynVerse

Crafting a Seamless Multilingual Media Experience.

by Shreya Pabalkar

Breaking the Language Barrier

Catered to over 60
languages globally

What I did:

- UX Research
- UX Design
- Accessibility evaluation

The Starting Point

20%

Low User Engagement

Lacked interactive elements for engagement.

Offered limited opportunities for users to actively participate or provide feedback, leading to a passive experience.

60%

High Cognitive Load

Confusing onboarding process. New users were overwhelmed by the complexity of the interface and the lack of clear guidance, resulting in a steep learning curve.

5%

3. Real-time Adjustability

Limited control over translation speed. Users had minimal ability to adjust the pace of content translation, which hindered comprehension and personalized learning.

Research Process

Literature Review

Review of previous research and on current viewing trends.

Market Benchmarking

Comparative analysis on 17 AI based tools.

Heuristic Evaluation

Usability assessment on over 20 existing screens and 5 user flows.

User Interviews

Gathering insights from 8 users.

Research Goals

User Interaction

Understand content interaction in isolation and in a shared setting.

Engagement

Improve community engagement and platform usability.

Onboarding

Improve platform onboarding and get more users to the platform.

Expansion

Validate concepts for integration of third-party applications and AI bots

Reimagining the Experience

1. Human Interaction

What: Designed the **content interaction flow**, enabling users to share, comment, support, adjust real-time translation speed, and access multilingual transcripts.

How: Benchmarking engagement strategies.

- Analyzing competitors.
- Mapped those findings against user pain points.
- Iteratively prototyped features such as comment overlays, multilingual transcripts, and real-time translation speed sliders.
- Validated using SUS surveys and direct observation of task completion rates.

Outcome: +30% increase in feature engagement.

Reimagining the Experience

2. Redesigning Onboarding and Introduced third-party apps

What: Designed new flows for user onboarding. Developed an **integration flow for third-party apps**.

How: Targeting already onboarded users

- Identified OTT user overlap.
- Proposed integration with existing tools.
- Faced initial stakeholder resistance.
- Presented supporting user data.
- Secured buy-in and designed features.

Before:

After:

Outcome: Strengthened **platform interoperability**, making VosynVerse a **more comprehensive tool**

Reimagining the Experience

3. Optimizing the Landing Page

What: Redesigned the **landing page** to minimize cognitive load, **reducing the number of clicks** required to understand and access the platform.

How: Targeting already onboarded users

- Identified mixed user perceptions.
- Ran internal task-based evaluations.
- Asked open-ended comprehension questions.
- Synthesized feedback in small teams.
- Brainstormed ideas in design huddles.
- Benchmarked clean, AI-first interfaces.
- Aligned team on minimalist direction.

Before:

After:

Outcome: Streamlined onboarding and engagement, increasing first-time user satisfaction.

Additional Work

Accessibility

Ran over 5 WCAG audits and designed for middle-aged, non-tech-savvy users.

AI Feedback Bot

Contributed to designing an AI feedback bot supporting 60+ languages.

IoT Ideation

Proposed scenarios using smart glasses and portable devices for language learning on the go.

Difficulties and Learnings

1 Limited Resources

We had to come up with creative alternative ideas to achieve our research goals within the constraints of our resources. This taught us to think outside the box and prioritize effectively.

2 Fast-Paced Work

The fast-paced nature of the internship required a constant communication loop to ensure everyone was aligned and informed. Regular check-ins and quick feedback cycles were essential for staying on track.

3 Strategic UX

We learned how to make actionable design decisions based on user research and data analysis. This strategic approach allowed us to create impactful solutions that addressed user needs effectively.

Challenges

Navigating cultural differences and language barriers

Learnings

Importance of empathy and adaptability
