

UX Research Intern Experience at Vosyn (VosynVerse Project)

Overview of the Company and VosynVerse

Vosyn is an AI-driven company specializing in **real-time voice synthesis and multilingual translation**, breaking language barriers to enable seamless global communication. The product **I worked on is VosynVerse**, a core product that transforms traditional content consumption by **allowing users to experience translated media in their desired language in real time**.

Existing Work on VosynVerse

Before my involvement, **VosynVerse** had foundational features, like **real-time translation and AI-generated multilingual voice synthesis**. However, it required enhancements in **user engagement, accessibility, and platform integrations** to establish itself as a holistic content experience rather than just a translation tool.

Gaps in the Product

Despite its innovative approach, several challenges were present:

- **User Engagement & Interaction:** The product lacked **interactive elements** that could improve **engagement, retention, and community-building**.
 - **Cognitive Load & Usability:** Users found the **onboarding process confusing**, and it required too many steps to reach core functionalities.
 - **Real-time Adjustability:** Users had **limited control over translation speed and language switching**.
 - **Community Features:** There was no seamless way to **share, comment, or engage with content collectively**, limiting its social impact.
 - **Third-Party Integrations:** VosynVerse needed **better integration with external apps** to expand its functionality.
